

# On the Move PODIATRY

We offer all natural injections for tendon, ligament, and joint pain. We perform stem cell injections and also specialize in custom shoe inserts. We have a wide selection of shoe brands that we order from and can measure your feet and make recommendations prior to ordering the shoes. We treat warts, wounds, ingrown toenails, corns, and fractures.

We have a portable x-ray and ultrasound which can be performed at your house if necessary. We also offer surgery for bunions, hammer toes, heel spurs, and other foot deformities which is minimally invasive and can often be performed in the office. We have a medical grade laser that can also treat pain. We are a direct care practice which allows us to offer affordable self-pay pricing. If you have any foot concerns, call us today for an appointment!
